To whom it may concern,

I am writing it looking forward to be a part of your company's success. With a hands-on experience using client side languages and server side languages to create and implement hybrid application, I am confident I will be an asset to Oracle.

After obtaining my Bachelor of Engineering in Automotive Engineering from Tsinghua University in China, I found myself drawn more to the challenges of developing, operating the software application than to those associated with Automotive Engineering. So I started to learn programming languages. 6 months later, I got an idea for startup and started making prototype as web-site immediately and found 2 more co-founders who were interested in to start a company, The Just For Misfits.

I have worked for the company I formed which was located in Seoul for about 2 years. I was in charge of designing and developing the item called JustForMe and now I have experience efficiently coding websites and applications using both languages in client side and server side. Although it didn't work out the way I wanted it to, I'm sure this experience shows that I certainly have a few strong points that are:

- Enjoying being challenged and engaging with projects that requirer me to work outside my comfort and knowledge set
- Highly skilled in designing, testing, and developing application
- Hands-on software troubleshooting experience
- Enthusiastic about learning new things and quick learner

I understand the job I'm applying now is requiring solid knowledge with the fields, such as the ontology and Nature Language Processing, which I have no experience with. However, I'm applying this job with confidence that I believe I'm the type of person who loves to be challenged by new things and have been looking for an opportunity to work for a company with great reputation and high profile like Oracle.

I have attached a copy of my resume that details my project and experience in development. I can be reached anytime via email at Danialnam89@gmail.com

Thank you for your time and consideration. I look forward to speaking with you about this employment opportunity.

Best regards.

Danial DaeHyun Nam
